

M365 Security Health Check Assessment

Know where your business stands against security threats with a M365 Security Health Check Assessment from ConRes. Malicious actors frequently target M365, taking advantage of vulnerabilities to infiltrate tenants by focusing on:

- ✔ Insecure or outdated authentication methods
- ✔ Security controls that are not configured properly
- ✔ Accounts with high levels of privilege
- ✔ Accounts with simple passwords or those that lack multifactor authentication

What is a M365 Security Health Check Assessment?

A zero-cost service that evaluates your M365 security posture and identifies potential risks and vulnerabilities, followed by a 60-minute consultation with a Microsoft expert who will walk you through the findings and answer your questions. Our goal is to help you maximize the benefits of Microsoft 365's security capabilities while mitigating potential risks.

Responsible AI

Strengthen your organization's security posture with a ConRes Microsoft Security Assessment

Relying on the cloud is the safest way to do business, but you still need to be smart. ConRes can help you establish processes for cyber-risk reduction in the cloud with a Microsoft Security Assessment. Available at no additional cost*, this assessment will provide your organization with a high-level look at your security posture by:

- Evaluating potential vulnerabilities
- Identifying unmanaged devices
- Analyzing current software deployment and usage
- Reviewing policies and controls to reduce risk
- Identifying and reviewing remediation recommendations

Collect & Analyze

Gather information on current environment and security practices

Plan

Identify business goals and objectives

Action

Build the plan to implement policies and controls to reduce risk with Microsoft 365

**Available at no additional cost to eligible customers who meet Microsoft program requirements*

Our deliverables:

- Executive summary report showcasing our findings
- A high-level snapshot of the existing M365 tenant security configuration
- Overview of Microsoft best practices for M365 Security
- Recommendations for future M365 hardening

Ideal for organizations:

- Deployment of M365/O365 E3, E5 and M365 Business licenses
- Securing their M365 environment
- Concerned about regulatory or security compliance
